Summary

Cybersecurity professional with 1 year of hands-on VAPT experience performing the core functions of a Security Analyst - web and network penetration testing, threat intelligence, and SOC monitoring using Wazuh SIEM. Reported 9 valid vulnerabilities on Bugcrowd with an 88.89% accuracy rate, ranking in the 84th percentile globally for high-severity findings. Holds CEH v13. Delivers clear, actionable vulnerability reports to both technical teams and executive stakeholders.

Experience

iGaruda Secure Cyber Solutions - VAPT Intern

March 2025 - Present

- Conducted web application and network penetration tests using Burp Suite and Nmap, identifying and documenting vulnerabilities across client engagements
- Performed threat intelligence operations to surface exposed assets, leaked credentials, and active sources of compromise — flagging critical risks before exploitation
- Monitored and triaged security alerts using Wazuh SIEM, supporting the SOC team in incident detection, escalation, and report generation
- Delivered vulnerability reports with clear remediation guidance to both technical and non-technical stakeholders, ensuring all critical findings were actioned within agreed client SLAs.

Independent Bug Bounty Hunter – Bugcrowd

July 2024 – Present

- Discovered and disclosed 9 valid vulnerabilities across web and Android targets with an 88.89% submission accuracy rate — ranking in the 84th percentile globally for P5 findings.
- Identified 5 Sensitive Data Exposure and 4 Server Security Misconfiguration vulnerabilities in real production environments across web app and Android attack surfaces
- Ranked in the 63rd percentile for P3 (high severity) findings against the global Bugcrowd researcher pool, demonstrating ability to find impactful, non-trivial vulnerabilities
- Hall of Fame recognition from NASA, McDonald's, Broadcom and various other organizations for responsible vulnerability disclosure.

Projects

Project – 1 ([Source Code URL - Extractor](#))

[Github link](#)

Built a Python reconnaissance tool using regex, BeautifulSoup, and requests to extract URLs from HTML and JavaScript source code — reducing manual recon time during security assessments

Project – 2 ([Virus Detection Tool](#))

[Github link](#)

Developed a real-time malware detection script using inotify-tools and ClamAV, integrating hash-based verification to detect unauthorised file modifications in Linux environments

Education

- Btech in Computer Science - Narsimha Reddy Engineering College (2021-2025)
- Intermediate - Sri Chaitanya Junior College (2019 - 2021)

Certifications

- CEH v13 — Certified Ethical Hacker
- Penetration Testing, Website Security Testing & Bug Bounty Hunting — ZSecurity
- IT Security: Defense Against the Digital Dark Arts
- Linux 100: Fundamentals
- Postman API Fundamentals Expert

Technical Skills

- VULNERABILITY ASSESSMENT (VA)
- PENETRATION TESTING (PT)
- WEB / API / MOBILE AND THICK CLIENT SECURITY
- Threat Intelligence & SOC Monitoring
- Secure Code Review (Basic)
- Active Directory Security

Tools: BURP SUITE, NMAP, NESSUS, ACUNETIX, WAZUH SIEM,
